EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Robert Fox on August 21, 2006.

The application has been amended as follows:

In claim 1, lines 5-6, "for controlling" has been deleted and replaced with – adapted to control--.

The following is an examiner's statement of reasons for allowance: The prior art fails to disclose or suggest a device having all of the claimed limitations. While angulation controllers are a known feature of endoscopes, as shown for example by Long and Watanabe, there is no disclosure or suggestion in the prior art of a simulated medical instrument such as an endoscope with an angulation controller having an angulation cable extending therefrom, whereby the cable is attached at the other end to a device adapted to control the resistance to movement of the cable, thereby providing force feedback in reaction to the movement of the angulation controller. This arrangement enables force feedback to be provided directly in response to movement of

the device, rather than indirectly by using sensors in the target area to locate the position of the device, as is the case in other force feedback type devices such as Fisher and Cunningham.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Watanabe and Long disclose medical instruments having angulation controllers. Fisher, Cunningham, , Gregorio, Alexander and Rosenberg disclose various medical instrument simulators.
